DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

3. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Art Unit: 2642

4. Claims 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over McKivergan (US 6,329,953; cited and applied for the first time) in view of Wallace et al. (Wallace; US 6,208,841 B1; cited by the applicants and applied for the first time).

McKivergan plainly teaches the testing chamber of claims 1-8 and the apparatus of claims 9-20 to evaluate a wireless communication device. See Figure 6 and column 4, line 29 – column 7, line 60. The only difference between the claimed invention and McKivergan is that McKivergan uses an array of Probe Elements controlled by a Probe Array Controller positioned on the inner wall instead of the claimed antennas. However, Wallace teaches the use of an array of antennas to evaluate a wireless communication device. Therefore, it would have been obvious even to one of ordinary skill in the art at the time of the invention to substitute the Probe Elements of McKivergan with the antenna array of Wallace in order to evaluate the wireless communication device in a more controlled environment of McKivergan.
